Theorem 1.1.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Lemma.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Proposition.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Corollary.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Definition 1.1.

$$E = mc^2$$

Conjecture 1.1.

$$E = mc^2$$

Example 1.1.

$$E = mc^2$$

Postulate 1.1.

$$E = mc^2$$

Problem 1.1.

$$E = mc^2$$

Remark.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Note.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Case 1.1.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Proof.

$$E = mc^2$$

□

Repeating once:

Theorem 1.2.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Lemma.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Proposition.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Corollary.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Definition 1.2.

$$E = mc^2$$

Conjecture 1.2.

$$E = mc^2$$

Example 1.2.

$$E = mc^2$$

Postulate 1.2.

$$E = mc^2$$

Problem 1.2.

$$E = mc^2$$

Remark.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Note.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Case 1.2.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Proof.

$$E = mc^2$$

□

2 Second Heading

Theorem 2.1.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Lemma.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Proposition.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Corollary.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Definition 2.1.

$$E = mc^2$$

Conjecture 2.1.

$$E = mc^2$$

Example 2.1.

$$E = mc^2$$

Postulate 2.1.

$$E = mc^2$$

Problem 2.1.

$$E = mc^2$$

Remark.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Note.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Case 2.1.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Proof.

$$E = mc^2$$

□

Subheading

Theorem 2.2.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Lemma.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Proposition.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Corollary.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Definition 2.2.

$$E = mc^2$$

Conjecture 2.2.

$$E = mc^2$$

Example 2.2.

$$E = mc^2$$

Postulate 2.2.

$$E = mc^2$$

Problem 2.2.

$$E = mc^2$$

Remark.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Note.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Case 2.2.

$$\nabla \times \mathbf{E} = -\frac{\partial \mathbf{B}}{\partial t}$$

Proof.

$$E = mc^2$$
